

BENEFITS

AeroSpreader S125

Configured for **AeroSpreader S125 (4" SS Flex Handheld Hose, Cable Controls, Stationary Skid 125, No Rotate Motor, No Extension Tube)**

WHY IT MATTERS

Benefits

The S125 is built to help farms place feed efficiently, reduce handling effort and adapt one broadcaster to different operating layouts. The benefits shown below reflect the chosen hose, control and mobility options so customers see the operational value of their actual configuration.

Complete feeding rounds faster

High delivery capacity lets crews move feed efficiently while retaining control of rate and placement.

Reduce routine drive maintenance

The direct-drive blower eliminates belt and pulley adjustment from routine service.

Direct handheld placement

The flexible handheld hose lets the operator react immediately to changing feeding activity and direct feed to selected areas.

Place feed where fish are feeding

Directional broadcasting helps distribute feed across the target area, which can reduce crowding and improve access to feed.

Protect feed quality

Smooth passages, a lined hose and the IAS feed eductor are designed to limit pellet abrasion and breakage.

Compact fixed installation

The stationary skid provides the smallest S125 footprint for docks, vessels, trucks or dedicated feeding positions.
